Hepatitis c mA@ throne can significantly affect how ³ your liver works. This can lead to complete liver failure and the need for a transplant to stay alive. Hepatitis B could be through sexual activity and exposure to infected blood. If you received a blood transfusion before 1992, you should also get tested for hepatitis C if you haven't had it previously. Hepatitis B usually causes short-term discomfort that many people recover from completely after about four to eight weeks. Most medications can remove all traces of the virus in your blood in about 12 weeks. It can also cause cirrhosis of the liver, which creates mass scarring and makes it difficult for the liver to work as it should. However, there is no easy fix that works for each person. Some people have it and may never know it as they are affected by any sorts of symptoms. Who Is at Risk to Get Hepatitis C? Learning more about each type of hepatitis can help you better understand the condition as a whole.Hepatitis A is the most easily transmitted of the three viruses. Hepatitis C, a virus that attacks the liver, is a

tricky disease. The varying forms of viral hepatitis affect millions of people in the United States. It typically spreads through feces-contaminated food or water and is found in the feces of people who have the virus. These include if you have HIV, inject or inhale drugs, are a health care worker who may be exposed to contaminated blood, have been in prison, received a tattoo or piercing from a questionable environment or were born to a woman with hepatitis C. However, there are medications that can help keep this disease in check. Currently, there are an estimated 6 million people living with hepatitis in the United States, and more than 50,000 people are diagnosed with this disease every year. This virus is more common in places with underdeveloped sanitation systems. It can also cause liver cancer. MORE FROM SYMPTOMFIND.COM Filter by:Select category from list...»

There is also a secure vaccine to protect it against hepatitis B, it also. What is hepatitis c? Photo courtesy: BSIP / Getty Images Approximately 4 million people in the United States are affected with hepatitis C. If you had to have symptoms of hepatitis C, How would you see? Hepatitis C is the main cause of liver cancer and hepatic transplants, according to webmd. You and your doctor will have to work together to find out what antiviral drugs will work on your particular situation. There are three main types of hepatitis, and although their symptoms may be similar, they vary greatly in the ways they are transmitted. If you use illicit drugs, you should look for treatment for a litany of reasons, you never share needles with other users. It can cause cirrhosis, which means that its normal hepatic tissue is replaced with scar tissue.
